Amendments to the Specification

Please amend Paragraph 0066 as follows:

[0066]   In the particular example illustrated in **Figure 4b,** methods 405, 406 and 408 have been configured to receive "tracing" treatment by plug-in module A 460; and, only method 407 is configured to receive both "tracing" treatment and "coverage" treatment by plug-in module B 470. As such, the process flow for methods 405, 406 and 408 involves from each of their respective entry 409, 410, 412 and exit 415, 417, 421 points: (1) invoking the dispatch unit 430; (2) dispatching the invocation to plug-in module A 460; (3) executing tracing method(s) with the handler 461 of plug-in module A 460 (e.g., record a start time and/or input parameters identified with the invoking method if the invoking method is invoking from an entry point; or, record an end time and/or output parameters and/or returned value identified with the invoking method if the invoking method is invoking from an exit point); and, (4) returning back to the entry or exit point that made the original invocation. Object 3 includes exit point 425, and object 4 includes exit points 422, 424.
